VESTA STATION COOPERATIVE
OFFICE OF COOPERATIVE REGULATION // PUBLIC SAFETY DIVISION

VSC-RN-07-04
ISSUED: NOVEMBER 2113
AF DATE: 9 AF
STATUS: ACTIVE
CODE REF: §07 ART.04
SEE ALSO: VSC-RN-04-23

◈ REGULATORY NOTICE — PROHIBITED POSSESSION

PROHIBITED ITEMS, CONFISCATION, AND APPROVED RESOURCE RECLAMATION

Items Listed Herein May Not Be Brought Aboard, Stored, Transferred, or Used Within Vesta Station Jurisdiction
Detected Items Are Subject to Immediate Confiscation Without Compensation

APPLIES TO: **ALL PERSONS AND VESSELS IN VESTA STATION JURISDICTION — NO EXEMPTIONS**

IN FORCE: 1 DECEMBER 2113

◈ 1. CONFISCATION POLICY

CORE POLICY — DON'T BRING IT OR IT'S OURS

Any item listed in this Notice that is detected within Vesta Station's pressurised jurisdiction — whether aboard a docked vessel, on a person, in stored luggage, in a rented hab unit, or embedded in mesh storage — is subject to **immediate confiscation without compensation, negotiation, or appeal at point of seizure.**

Confiscated items are transferred to the custody of the **Vesta Station Cooperative Approved Resource Reclamation Programme (VSARRP)**, under which they are assessed, catalogued, and disposed of through contracted reclamation partners operating under Cooperative licence. The former owner has no claim to the item or its assessed value following confiscation. Appeals regarding confiscation procedure — not the confiscation itself — may be filed within 30 days under Section 6 of this Notice.

◈ 2. EGO INTEGRITY AND STACK TECHNOLOGY

Vesta Station treats unlicensed interference with ego, cortical stack, or resleeving infrastructure as among the most serious offences within its jurisdiction. The following items are prohibited without exception:

◈ PROHIBITED — EGO AND CORTICAL STACK

- **Portable cortical stack extraction tools (unlicensed):** Stack extraction hardware carried without a current Vesta Station medical licence is prohibited. Licences are issued only to registered medical practitioners with a current practice address on station. Off-station medical credentials are not transferable. Possession without licence: criminal referral under §31 (Unlawful Interference with Ego Integrity).
- **Portable ego bridge hardware (unlicensed):** Resleeving outside a licensed Vesta Station clinic is prohibited. Portable ego bridge rigs capable of performing unauthorised resleeving are confiscated on detection. The concern is identity integrity — the Cooperative cannot verify consent or continuity in an off-book resleeve. Unlicensed ego bridging is treated as equivalent to kidnapping regardless of whether the subject consented.
- **Farcaster and pandora gate access hardware (unlicensed):** Any device designed to interface with unregistered egocasting or gate infrastructure is prohibited. Licensed egocast terminals exist at the hub. Anything else is confiscated.
- **Petal and narcoalgorithm variants (restricted class):** Cognitive-manipulation narcoalgorithms on the Outer Alliance restricted list are prohibited. The full list is available at the Public Safety kiosk at all docking entry points. Standard recreational petals with commercial registration are not affected by this Notice.

◈ ENFORCEMENT NOTE — STACK EXTRACTION TOOLS

Cortical stack extraction tools are the single most commonly detected prohibited item on Vesta Station. Security contractors and corporate operatives arriving under commercial survey permits routinely carry them without the required medical licence. **Detection of unlicensed stack extraction tools in a commercial operator's possession will result in confiscation, a criminal referral, and immediate review of all permits held by that operator and their affiliated organisation.** VSCS does not treat this as a minor infraction.

◈ 3. MESH INTRUSION AND SURVEILLANCE HARDWARE

Vesta Station's mesh infrastructure is cooperative-owned and cooperative-operated. Private surveillance operations conducted without Cooperative authorisation are treated as corporate espionage or stalking depending on context. The following are prohibited:

◈ PROHIBITED — MESH AND SURVEILLANCE

- **Covert surveillance mote swarms:** Deploying a private mote network within station jurisdiction is prohibited without a commercial surveillance licence (available to registered security contractors only, 90-day application process). The station's mote infrastructure is cooperative property. Private mote clouds are read as either corporate intelligence operations or personal harassment. Both are prosecuted.
- **Passive identity harvesters and sniffer programs:** Any program or hardware device that passively collects mesh identity data from third parties in public spaces is prohibited. This was tightened under VSC-REG-0442. Anyone running a passive ID sweep in the Coppervein Market, docking ring, or any other commercial zone is in active violation.

- **Dedicated mesh intrusion rigs:** Hardware specifically designed for attacking, penetrating, or manipulating third-party mesh systems — as distinct from personal security tools — is prohibited. VSCS uses context and configuration to make this determination. A gray box is a personal security device. A rack-mounted intrusion platform is not.
- **Basilisk hack files and sensory override packages:** Any file capable of causing involuntary neurological, sensory, or cognitive effects on a transhuman mind is absolutely prohibited. No licence available. This is a TITAN-era legacy classification and Vesta enforces it without discretion. Possession is criminal. Attempted deployment is treated as an act of violence against the station.

◈ GREY AREA — PERSONAL SECURITY TOOLS

A gray box, personal firewall upgrade, or standard exploit app suite carried for personal mesh security is *not* covered by this Notice. The line between personal security and intrusion hardware is determined by configuration and apparent intent. A VSCS officer who finds a gray box will note it. A VSCS officer who finds a gray box alongside a passive ID harvester and a mote deployment kit will treat the gray box differently. Carry personal security tools. Do not carry offensive mesh infrastructure.

◈ 4. NANOSWARMS AND ENGINEERED BIOLOGICAL AGENTS

◈ PROHIBITED — NANOTECH AND BIOLOGICAL

- **Offensive-class nanoswarms:** Any nanoswarm designed to attack, degrade, or compromise biological or synthetic targets is prohibited. Medical nanoswarms with current commercial registration and industrial nanoswarms with an engineering permit are not affected. An unlabelled nanoswarm canister with no commercial registration is confiscated and referred for analysis.
- **Engineered toxins with no registered commercial application:** Chemical or biological agents with no current commercial registry entry — i.e., anything that reads as an assassination or incapacitation tool — are prohibited. The Cooperative maintains a standing prohibited list, updated quarterly, available at the Public Safety kiosk.
- **Atmospheric modification agents (unlicensed):** Any substance capable of altering the station's atmospheric mix, whether introduced deliberately or as a byproduct of another process, requires an engineering permit issued by the Vesta Station Engineering Authority. Unlicensed atmospheric agents are treated as existential threats to station integrity regardless of intent. See also VSE-TB-0291 regarding structural integrity obligations.
- **Replicating biological or synthetic agents not under active containment protocol:** Any self-replicating agent — biological, synthetic, or hybrid — that is not enclosed in an approved containment vessel with a current VSEA inspection certificate is prohibited. This includes experimental samples, research specimens, and "inactive" agents. If it can copy itself and you haven't got the paperwork, it's confiscated.

◈ 5. STRUCTURAL AND ENVIRONMENTAL RISK EQUIPMENT

◈ PROHIBITED OR PERMIT-REQUIRED — STRUCTURAL RISK

- **High-powered cutting equipment without engineering permit:** Plasma cutters, thermal lances, and equivalent tools capable of compromising hull integrity require an engineering permit from VSEA before being brought aboard. Work-registered riggers and maintenance contractors are exempt while operating under an active work order. A plasma cutter in a traveller's bag is not covered by a rigger's general exemption.
- **Unlicensed explosive compounds and shaped-charge systems:** All explosive materials require a commercial mining or demolition licence issued by the Cooperative Council. No general permit is available. Detection results in confiscation and criminal referral. This includes military-grade charges, breaching tools, and improvised systems. See VSC-RN-04-23 for weapons-classified explosive systems.
- **Fabrication systems capable of producing prohibited items:** Any nanofabricator, cornucopia machine, or equivalent device configured to produce items listed in this Notice or in VSC-RN-04-23 is subject to confiscation. A standard personal fabber with a commercial recipe library is not affected. A fabber loaded with weapons patterns, unlicensed pharmaceutical templates, or offensive nanoswarm blueprints is confiscated in its entirety — not just the offending templates.
- **TITAN-era hardware and unclassified salvage:** Any device, substrate, or component recovered from TITAN-era sites that has not been cleared by an Outer Alliance certified xenotech assessment is prohibited from station entry. This applies regardless of apparent inactivity. Unclassified salvage presenting on inspection as possibly TITAN-derived is confiscated pending assessment. The former owner is not compensated for assessment time. If assessment returns a TITAN classification, criminal referral is automatic.

◈ 6. CROSS-REFERENCES AND RELATED NOTICES

◈ THIS NOTICE DOES NOT COVER THE FOLLOWING — SEE RELATED DOCUMENTS

Weapons and ballistic hardware — see VSC-RN-04-23 (Firearms Carriage and Discharge Ordinance). Hull-breach capable weapons, flechette systems, and explosive ordnance are covered there, not here.

Drones, autonomous platforms, synthmorphs, bots, and non-biological persons — see VSC-RN-03-11 (Synthetic Entities, Autonomous Systems, and Non-Biological Persons). Registration requirements, operational restrictions, and the synthmorph registry are covered in that Notice. The worker pod registration requirement introduced under VSC-REG-0442 is administered under VSC-RN-03-11.

Hull material integrity and structural breach risk — see VSE-TB-0291 (Hull Material Integrity Ratings and Ballistic Breach Risk Classification) for the engineering basis underlying prohibitions on atmospheric agents and structural risk equipment in this Notice.

◈ 7. CONFISCATION, PENALTIES, AND CRIMINAL REFERRAL

OFFENCE	OUTCOME
Any prohibited item detected on person or in luggage	`Immediate confiscation` — no compensation. Item transferred to VSARRP.
Unlicensed cortical stack extraction tools	`Confiscation + criminal referral` — §21 Unlawful

Unlicensed cortical stack extraction tools	`Confiscation + criminal referral` — §31 Unlawful Interference with Ego Integrity. All operator permits reviewed.
Basilisk hack file possession	`Confiscation + criminal referral + detention` — minimum 30-day hold pending threat assessment. No bail.
Covert surveillance mote deployment	`Confiscation + 500 cr fine + criminal referral` — §19 Unlawful Surveillance. Corporate affiliates notified to Cooperative Council.
Offensive nanoswarm possession	`Confiscation + criminal referral + station ban` — §44 Reckless Endangerment of Station Integrity if deployed.
Unlicensed explosive compounds	`Confiscation + criminal referral` — immediate detention pending assessment of intended use.
TITAN-era unclassified salvage	`Confiscation pending assessment` — TITAN classification triggers automatic criminal referral and Cooperative Council notification.
Prohibited fabber template configuration	`Full device confiscation` — not limited to offending templates. 200 cr fine per prohibited template category detected.

◈ 8. APPROVED RESOURCE RECLAMATION PROGRAMME

◈ VSARRP — VESTA STATION COOPERATIVE APPROVED RESOURCE RECLAMATION PROGRAMME

All confiscated items are transferred to VSARRP within 48 hours of seizure. VSARRP conducts an independent assessment of each item's condition, residual value, and safe disposal requirements. Items assessed as safe for commercial reuse are offered to Cooperative-licensed reclamation contractors via sealed tender. Items assessed as hazardous are disposed of under VSEA containment protocol at the former owner's cost.

The former owner retains no claim to the item, its assessed value, or any proceeds from its disposal. VSARRP is not a storage service, a pawnbroker, or a holding facility. It is a reclamation operation. Once an item enters VSARRP custody it does not leave via the same route it arrived.

Current VSARRP reclamation contractors are listed at the Public Safety kiosk at all docking entry points. The Cooperative does not endorse, guarantee, or accept liability for any transaction between a former owner and a reclamation contractor conducted independently of the VSARRP process.

◈ 9. APPEAL PROCEDURE

Appeals regarding *confiscation procedure* — alleging that VSCS officers did not follow correct process in seizing an item — may be filed with the Office of Cooperative Regulation within 30 days of confiscation. Appeals must be filed in

item — may be filed with the Office of Cooperative Regulation within 30 days of confiscation. Appeals must be filed in person at the Regulation Office, Cooperative Administration Level, or via registered mesh submission.

> ◈ WHAT CANNOT BE APPEALED
>
> The decision to confiscate a prohibited item is not subject to appeal. If the item is on the prohibited list and it was in your possession, it is confiscated. An appeal cannot restore a confiscated item, redirect it from VSARRP, or seek compensation for its value. The only appealable matter is whether the correct procedure was followed at the point of seizure. **Do not bring prohibited items to Vesta Station and expect a procedural appeal to recover them. It will not.**

Filing address: Office of Cooperative Regulation, Level 2 Administration, Vesta Station Cooperative Hub. Mesh: vscreg.vesta.belt // Ref: VSC-RN-07-04-APPEAL. Response time: 20 working days. Appeals that do not allege a specific procedural error will be returned without review.
